Jamesbury™ supervisory cock valves, electric interlocking fuel gas and fuel oil cocks - Figure 1051

The Jamesbury™ Figure 1051 Supervisory Cocks are FM (Factory Mutual) approved to provide shutoff and position indication for proper fuel light-off of either fuel oil or gas burners. Developed for use with semiautomatic or manual safety interlock burner management systems, these electric interlocking cocks indicate the burner cock is closed before the light-off sequence can begin.

Figure 1051 Supervisory Cocks allow fast actuation, have low turning torque, and feature reliable, tight sealing for critical fuel control applications. Should the valve be accidentally moved out of the full closed position, the “not closed” condition is signalled to the safety interlock system. Closing the valve requires only a quick quarter turn of the handle. For added protection, the position of the valve handle gives visual “at a glance” indication of open or closed position.

Limit switches on these cocks are contained in a compact die cast aluminum housing – all moving parts are enclosed to protect the switches from moisture and corrosion, tampering or accidental change. The limit switch housing assemblies are also FM approved to NEMA 4, 4X, and 6; Class I, Div. 1, Groups B, C, & D; Class II Div. 1, Groups E, F & G for watertight and explosion proof hazardous location service.

Figure 1051 Supervisory Cocks are available with either screwed or socket weld ends in sizes 1/2” through 2” (DN 15 – 50). Materials include carbon steel or 316 stainless steel. ANSI Class 150, 300 & 600 flanged design Supervisory Cocks are available in sizes 1/2” through 6” (DN 15 – 150). All valves have low coefficient of friction seats that assure consistently low operating torque. Flexible-lip valve seats are self-compensating for wear and provide tight shutoff. No injection of lubricants or sealants is ever necessary.

Valve assemblies are available with several different limit switch arrangements, using either single pole double throw (SPDT) or double pole double throw (DPDT) switches, rated as follows:

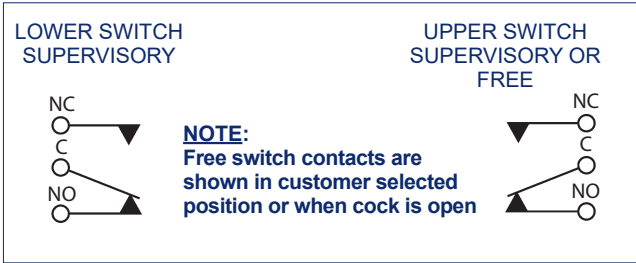

Voltage	Switch Ratings in Amperes		
	QZM2VB1DSS (SPDT)	QZM14B1DSS (DPDT)	QZP2HB1DSS (Hermetically sealed SPDT)
125V AC	10	4.5	.30
250V AC	10	4.5	–
125V DC	.50*	–	–

* Not recommended for electrical circuits operating at less than 20mA @ 24 VDC

SWITCH ARRANGEMENTS

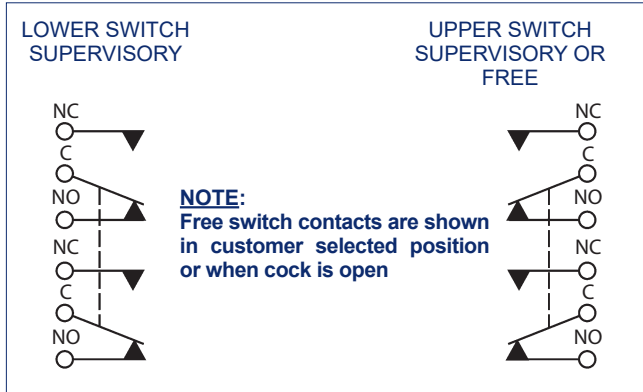

Contacts of each switch are in position shown when valve is closed

SPDT Switch Contact Schematic

Available switch combinations are shown in the “How to Order” table. Switches designated as “supervisory” are set so that they are actuated only when the valve is in the fully closed position. They are then secured to avoid accidental relocation and marked to show any attempts at tampering. Switches indicated as “free” for use with indicator lights or other control or sequencing purposes, are normally set to close when the valve is fully open, and may be adjusted

DPDT Switch Contact Schematic

to operate at any valve position (DPDT switches can be adjusted only for the end of travel, i.e., valve full open or valve full closed).

SPECIFICATIONS

Maximum Operating Pressure Ratings

Figure 1051 Supervisory Cocks are rated for service based on FM approval tests as shown to the right. Approval is for use where the fluid temperature does not exceed 250°F

(121°C) and the ambient temperature does not exceed 125°F (51.7°C).

Flow Data

The table below provides flow coefficients of the Supervisory Cocks covered in the bulletin. The Cv values represent the flow of water at +60°F through the valve in U.S. gallons per minute at a pressure drop of 1psi. The

metric equivalent, Kv, is the flow of water at 16°C through the valve in cubic meters per hour at a pressure drop of 1 kg/cm². To convert Cv to Kv multiply by 0.8569.

HOW TO ORDER JAMESBURY SUPERVISORY COCKS

The Supervisory Cock figure designation is made up of numbers and letters that describe all features of the available variations of the cock. Coding is as follows:

1	2	3	4	5	6
5	7	E	3	X	B

B131-1EN - 1/2022

Note: When ordering 1/2" (DN 15) Series 4000 valves always use the style codes shown above for standard port types even though this size is Full Port design.

Example: A 1-1/2" (DN 40) Supervisory Cock in Series 4000 standard port screwed end design in carbon steel with 316 stainless steel trim, with two supervisory double pole double throw limit switches, *Xtreme* seats and ANSI rating has the designation Figure 1051-57E3XB.

1	Size	1	2	3	4	5	6	7	8	9
	inches	1/2	3/4	1	1-1/4	1-1/2	2	3*	4*	6*
	DN	15	20	25	32	40	50	80	100	150
