

Service Center Barcelona, Spain for Flow Control solutions

Valmet's service center for flow control solutions in Sant Cugat del Vallés, Barcelona, Spain, supports the company's strategy to grow its valve and field device service business for major petrochemical, energy, refining, and pulp and paper companies within the country. In all we have more than 40 service centers worldwide.

Full service to all Valmet valve products

The Spanish service center covers 600m² of workshop, storage and office space to further enhance service and sales activities for Spanish customers. It has the capacity and the latest technology needed to handle large-scale

shutdown turnarounds, general repairs of valves, actuator etc., including 3rd party valves, spare parts, training programs, Valve Management Solution, field support and diagnostic services.

Our Valmet experts also provide recommendations for actions based on an installed base analysis, lifecycle status, maintenance history, and equipment and process criticality.

Improving process performance

Our services mission is to maximize the quality and cost efficiency for our customers' processes by combining intelligence with the field service offerings. High quality maintenance and repair is safely executed by certified valve and smart product service experts. The latest designs of original spare parts, together with an expert repair process are used to meet the original product specifications. The

service center enables a faster response time for unexpected situations. Our on-site service expert can provide a follow-up service for installation and commissioning to secure a safe and ontime start-up.

Fulfilling high Valmet standards

As the original equipment manufacturer of Neles™, Jamesbury™, Flowrox™, Neles Easyflow™, Stonel™ and Valvcon™ product lines, Valmet can guarantee that all repair and overhaul works are carried out according to the highest standards so that goods would leave our service center with certification and overhaul warranty, the same level as new manufactured valve packages.

Valve repairs are well planned, documented and carried out according to ISO9001 and ISO14000 and the service personnel in the Barcelona service center are ATEX trained.

"Valmet is a leading world-class solutions and services provider, your preferred service partner."

Decades of know-how

Valmet flow control services offering

Valmet's expert portfolio includes proven services tailored to help customers improve plant reliability and safety, get the most out of equipment, meet production goals, and overcome process challenges.

Spare equipment and parts

As the original equipment manufacturer, Valmet guarantees spare equipment and parts of the highest quality and latest design to meet original specifications with the correct materials. Original parts and Valmet maintenance procedures guarantee the same warranty as we offer for new products.

Maintenance and repair

When equipment requires maintenance, our valve service experts and certified smart product service experts will carry out high quality repairs so that the equipment's performance can be returned, to as close as possible, to new performance.

Turnaround services

With Valmet you get expert support for turnaround planning to ensure the correct work scope with needed activities, materials and resources for effective execution and a smooth start-up. Detailed planning ensures a safe and reliable process until the next planned turnaround.

Installation, start-up and commissioning

Our project and engineering services are designed to offer fast and trouble-free installation, commissioning and plant start-up with on-time and on-budget project implementation. These services apply to the implementation of new equipment and systems, as well as modernization and upgrades.

Training

Training is vital to ensure the operational skills of personnel from installation to operation and maintenance activities. Our professional training program is based on training modules but always tailored to the exact needs of your personnel.

Installed base analysis

The installed base analysis consists of visual inspection, actual product type verification with life-cycle status based on spare parts and replacement availability. Our experts also recommend long-term and immediate maintenance actions, and modernizations and upgrades to ensure that the products meet today's process requirements. Inventory analyze and recommendation will ensure that decreed service level can be met with optimized inventory value.

Condition analysis

Condition analysis utilizes diagnostics, leakage testing and visual inspection to pinpoint equipment needing proactive maintenance in order to avoid any unplanned breakdowns. With continuous monitoring, efficient process performance can be ensured. Our condition analysis process will turn diagnostic data in to concrete proactive service recommendations, when needed our service experts can help in executing corrective actions and as corrective actions are done we monitor the outcome to close the loop.

Resident engineer

Resident engineer can provide a dedicated expert – a single point of contact – for innovative and tailored services that you need on an ongoing basis at your site. This gives you an extra resource, a valve specialist with state-of-the-art tools and processes. Working with your operation and maintenance, we can conduct daily diagnostics identify and prioritize valves that require maintenance – and then fix those right away. Services can include also managing and replenishing your valve spare part stocks or when it's time for a site shutdown, we help you plan and prioritize actions according to service need and valve criticality.
